

Registration Ref.	#156 (4/1/2010)
Cultivar Name	<i>P.</i> 'Albert'
Originator	Rosali Ziller (Germany)
Parentage	<i>P. coriacea</i> (♀) × <i>P. megacoriacea</i> (♂)
Description	Stem round; flowers 4cm in diameter, no fragrance; petals absent; sepals cream-white with green border on adaxial surface, green on abaxial surface; outer filaments 1cm, yellow at apex, green/brown mottled at base; inner filaments 0.3cm, cream-white at apex, green at base; peduncle 0.3cm; leaves 2-3 lobed, variegated, unserrated, up to 9cm x 18 cm; bracts tiny; stipules 0.2cm x 0.05cm; petiole 3 - 5cm with 2 petiole glands. First flowered September 2009. Probably flowering throughout the year. Minimum temperature unknown. Name derives from that of breeder's husband.
