

Registration Ref.	#163 (31/8/2010)
Cultivar Name	<i>P.</i> 'Arabesque'
Originator	Maurizio Vecchia (Italy)
Parentage	<i>P.</i> 'Aurora' (♀) × <i>P. sublanceolata</i> (♂)
Description	Stem round, hirsute; flowers 9.5cm in diameter, no fragrance; petals and sepals pink; outer corona filaments short, white at base, purple at apex; leaves three-lobed, hirsute 11 cm long x 9cm wide, margin denticulate; petiole 3cm with numerous glands; peduncle 8cm; bracts 2cm, 3-4 pinnatisect. Flowering period June to October. First flowered in 2009. Minimum temperature 10C. The female parent is a hybrid of <i>P. foetida</i> and <i>P. sublanceolata</i> . Name refers to the shape of the bracts.
